

USER MANUAL GRANITA SLUSH MACHINE

MODEL: GRANITA-1N, GRANITA-2N, GRANITA-3N

USR Brands, Inc.

Phone: 800-764-1172 | www.usrestaurant.com | sales@usrestaurant.com

Warning!

To operate the slush machine properly, please read below instruction carefully.

The product should be placed for 24h before turning it on.

When using the new product, it needs at least 30-45 minutes to produce the frozen smoothies for the first time.

Please NOTE: The the total capacity of the mix or recipe(liquid) inside the cylinder needs to be above the minimum level line and below the maximum level line.

Please NOTE: The sugar content of the mix or recipe must be between 13%~17%.

Please NOTE: The recommended sugar content of the mix or recipe is 15%.

Please don't use Coca-Cola, sodium, beers, cocktail, cyclamate, saccharin, juice or other substance which contains too MUCH water but too LITTLE sugar.

Please NOTE: If you have to use alcohol in this machine, please make sure to regularly wipe the condensation water on the outside of the bowls to prevent the outside from freezing. It's advisable to add the alcohol after the slushy has been served or to serve it separately.

If there is too much water in your mix, it will eventually cause the agitator shaft freezing and then stop spinning. Instead, if there is too much sugar, it is difficult for the machine to freeze the mix properly.

If this happens, please follow below instruction to solve it:

- 1. Power off the machine IMMEDIATELY, don't force to run the machine again, otherwise, one of the small plastic clips inside the agitator shaft would be damaged.
- EMPTY and DRY the tank, let the ice blocks inside the agitator shaft COMPLETELY melt. It is recommended to dry it at least 72 hours to make sure ice blocks inside the motor and agitator shaft melt completely.
- 3. CHANGE your recipe IMMEDIATELY. It is the KEY point TO SOLVE THE PROBLEM. The recommended recipe is water/granulated sugar=10kgs/1.5kgs. Granulated sugar is recommended. Please don't add Coca-Cola, beers, wine, cocktail, sodium cyclamate, saccharin, juice or other substance which contains too much water but too little sugar. The sugar content of the mix or recipe must be at least 13%.
- 4. Power on the machine and turn on frozen button for each tank.

General Use of The Machine

1 Place machine on a flat surface Leave at least 25cm on all sides for air circulation to avoid overheating, Optimum romm temperature range:25°C-32°C.

2 Pay attention to the voltage, Be sure there is a ground pole, Do not plug more than one machine in to one socket, Extensions cords not recommended.

3 Mix product in a separate container if your product is a liquid concentrate, or powder, to be mixed with water, do not dilute more. There must be at least 13% sugar content to avoid breakage of ice scraper blade.

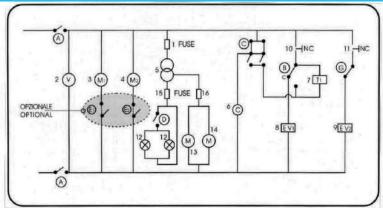

A Never turn machine on without product in bowl or with only water in bowl. Pour product into bowl to "max" line [never add a hot product]. Do not let product go below "min"line [keep at least 1 " above cylinder at all times].Refill with refrigerated product when level is halfway bet ween min and max levels, This way there will always be frozen product available for customers).

5 Adjustment for slush consistency, The machine has been adjusted for fruit granitas Inormall.Products containing milk, or other products which may take longer to freeze, adjust" +" as showm in picture.

Spare Parts List

Maintenance

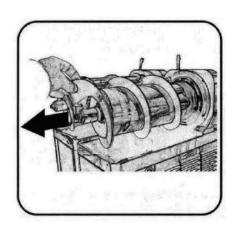

To emply bowl:turn power off. Drain product.
Fill bowl with tepid water, Let stand 15 minutes

(a) Slowly remove bowl, as shown in picture. Wash parts with tepid water. Never use detergent. Do not use abrasive cleaners,

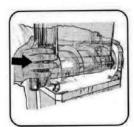

To remove bowl for thoroughly cleaning: Attention~ Before raising bowl make sure that it is completely empty, Drain product, Turn poweroff. Raise bowl at front until legs "pop" out, as shown in picture,

Remove spiral blade, as shown in picture, Remove large gasket at back of machine, as shown in picture, Wash parts with tepidwater and disinfectant,

Maintenance

16 Replacing parts:

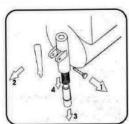

1)Replace gasket. Be sure seal is tight with no gaps against backof machine. Seal is best when starting at bottom+pressing with thumbs on each side towards the top; 2)Replace auger.

3) Replace bowl. Slide on and press against gasket.

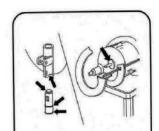

Using thumbs, press on both legs until they snap in place. Replace lid.

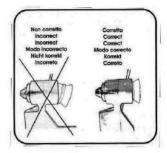

ATTENTION: WHEN USING A MILK BASED PRODUCT, THOROUGHLY CLEAN EVERY DAY. PERIODICALL YCLEAN UNDER ORING ON TAP

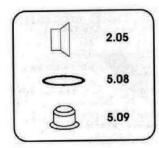

- (8) Remove spout and separate parts in following order:
 - 1) Pin
 - 2) Handle
 - 3) Tap pin
 - 4) Tap spring Wash spout parts in warm water and disinfectant. Then lubricate Tap.

(B) Daily, or after each thorough cleaning lubricate where indicated

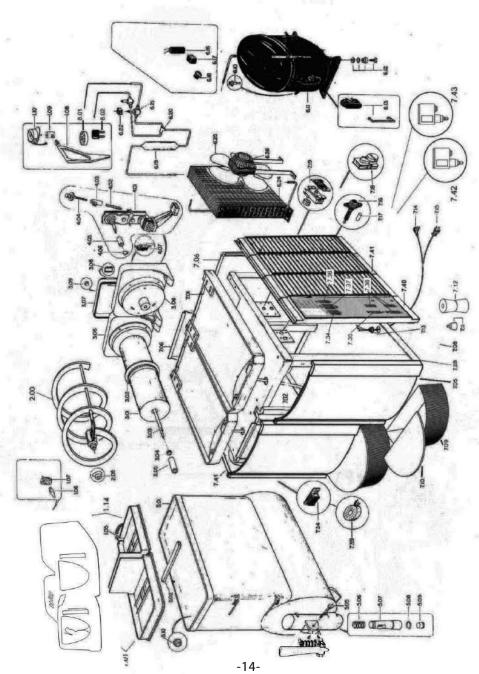

Push suction cap gasket into spiral head deeply. Be sure that cap gasket is properly positioned, as shown in picture,

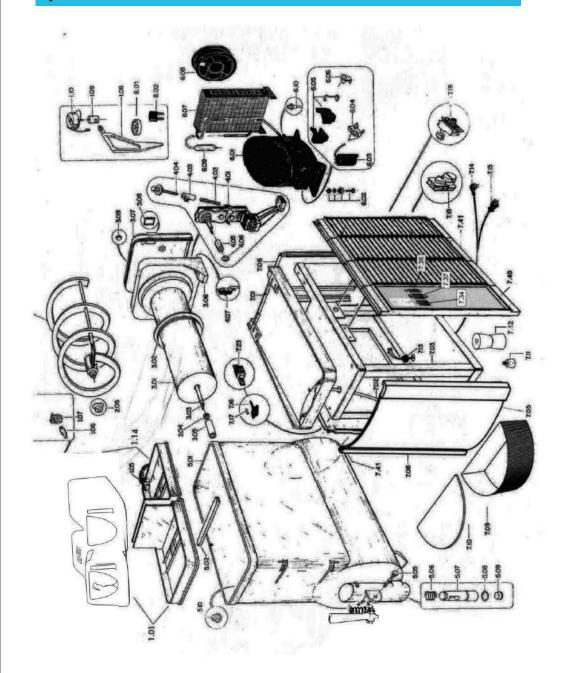

2 Every month check following parts: 5,08 Tap o-ring 5,09 Lower gasket for tap

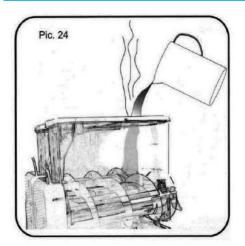

Spare Parts List

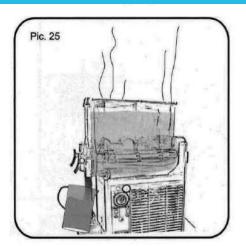

Spare Parts List

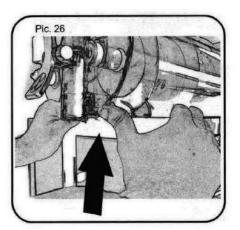

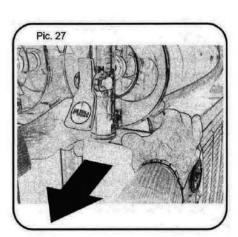

Basic Sanitizing & Cleaning

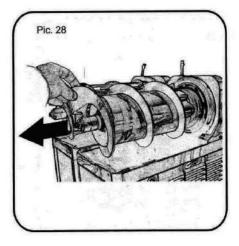

- 2 Turn power off. Fill the tank with tepid water and empty it just using the tap (see Pict.24 & 25)
- 23 For an easy removal of the bowl. Please follow instructions shown in Pictures 26 & 27.

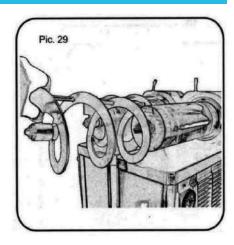

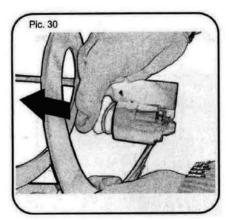

- Place fingers under the front lower part of the bowl, near the tap, and push upwards until legs pop out.
- Place fingers behind the bowl legs and pull the bowl onwards slowly until it has been completely removed.
- ATTENTION: Place all the components in a safe place in order to be sure they are not lost. Clean the components with dish-washing soap and tepid water. Never useabrasive cleaners.
- NOTE: Do not use too hot water to clean the plastic components. 2,05 Suction cap gasket,

Basic Sanitizing & Cleaning

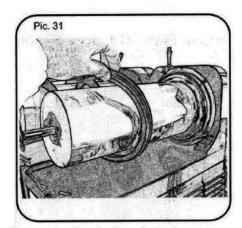

To remove spiral blade put fingers on the plate part of the spiral and pull it onwards gently as shown in Pict. 28 & 29.

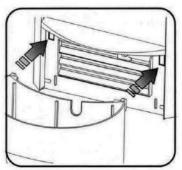

Once the spiral blade is removed completely remove the suction cap gasket from the front spiral as shown in Pict. 30

Remove bowl gasket from the back part 33 of the evaporator tube (see Pict. 31).

- 30 ATTENTION: Place all the components in a safe place in order to be sure they are not lost, remove the suction cap gasket from the front spiral as shown in Pict. 30
- 3) Clean the components with household bleach and tepid water. Never use abrasive cleaners.
- **®** NOTE: Do not use too hot water to clean the plastic components.

Reassembly of The Components

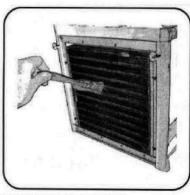

3 Fit in the drip tray on the panel by inserting the hookings into the appropriate slots.

Fix the drip tray by inserting the hookings into the panel slots. Make sure that the discharge tube is placed correctly ["1""), Push the drip tray downwards to fasten it in the panel bookings("2")

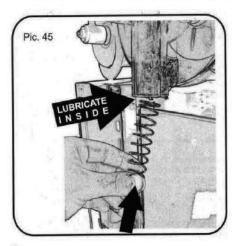

Insert the grate as shown in the drawing ("1") by placing thetongue first and then rotating it a bit until it is in the right position C"2"].

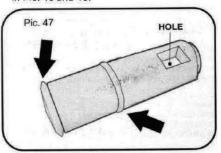

© CONDENSER CLEANING Remove side panels, Clean condenser with a brush every week, Attention! A dirty condenser can cause compressor damage.

Reassembly of The Components

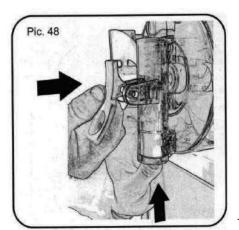

60 Before reassembling of the tap components lubricate by water the tap siege as indicated in Pict. 45 and lubricate with abundant water the seals as indicated in Pict. 47

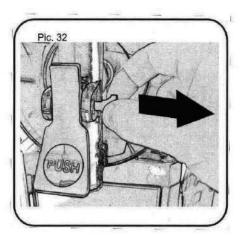

When inserting the main tap pin please be careful that the little square hole (see Pic. 47) is placed right in front of you. Before inserting the tap pin lubricate with abundant water. Keep the tap pin pressed upwards until you are able to see the square hole where you will insert the handle (see Pict. 48). Insert the pin for handle fixing as indicated in Pict. 49.

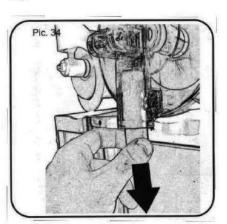

Pic. 49

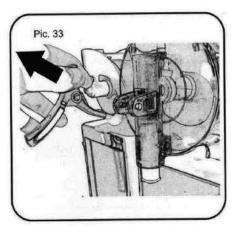

Basic Sanitizing & Cleaning

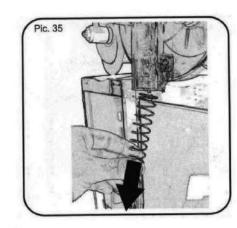

31 - Pull out the pin for handle fixing (see Pict. 32).

663 – Unthread the main tap pin by pulling it downwards (see Pict.34)

3 2 - Pull the handle from its place (see Pict. 33).

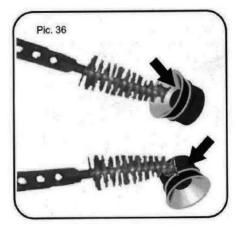

39 4 - Repeat the same operation for the tap spring (see Pict. 35)

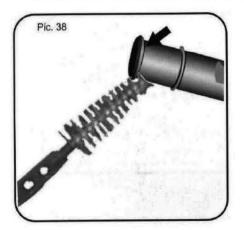

- 49 ATTENTION: Place all the components in a safe place in order to be sure they are not lost.
- 39 Clean the components with household bleach and tepid water. Never use abrasive cleaners.
- MOTE: Do not use too hot water to clean the plastic components.

Basic Sanitizing & Cleaning

How toclean each part

Oclean the lower gasket for tap as shown in Picture 36.overheating, Optimum romm

Oclean the lower gasket for tap as shown in Picture 38

(2) clean the bowl gasket along all the edges as shown in Picture 37.overheating, Optimum

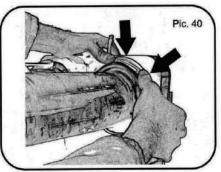

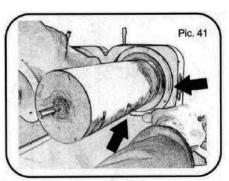

4 clean the bowl gasket along all the edges as shown in Picture 39shown in Picture 39

ATTENTION: Clean the gaskets carefully. Do not use aggressives detergents or abrhasive products. Softly wet the surfaces by the use of a brush. It is recommended to proceed with the cleaning of all gaskets with abundant water

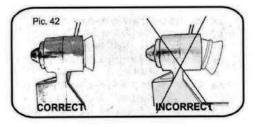

Reassembly of The Components

Reassembly of the parts removed during the cleaning. Before reassebling of parts, clean the evaporapor tube and drip trays & grids without using abrasivecleaners. Before reassemblying the bowl gasket rinse it with water in order to facilitate the assembly of the bowl.

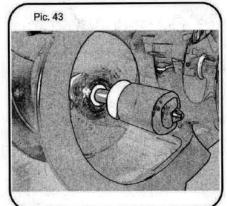

Put the bowl gasket in its position on the back part of the evaporator tube. Once the bowl gasket is in its right position press it with your thumbs first in the lower part and thenprogressively towards its upper part (marking a circle with your fingers); until it is correctly fixed in itssite (see Pict. 40 & 41).

Insert the suction cap gasket into the spiral blade by pushing it deeply (see Pict, 42). Lubricate with water.

Insert the spiral blade by pushing it gently and deeply as indicated in Pict. 44a & 44b. After this it isimportant to lubricate the head of the spiral (see Pict. 43).
