## PREPLINE

## USER MANUAL <br> COUNTERTOP DOUGH SHEETER / ROLLER

MODEL: DR12-1, DR18-1, DR12-2, DR18-2

## Warning: Please read the user manual carefully before operating the machine.

## Installation

1/ remove the protection film, avoid contact with utensils that can damage the surfaces, check that machine is not damaged. Please contact with the manufacturer if it is damaged.
2/ The machine must be installed in dry, adequate ventilation and lighting environment condition. Position the machine on a flat and firm place, you can put it on a work bench whose height fits you (about 700-900mm), and leave a space around 150 mm for easier usage and cleaning.
$3 /$ connect the machine to the electric supply by an electric technical personnel. It is suggest that using copper wires (at least 2.5 mm square) for the electric wires. It is important to have a good ground system and a protection switch (5-10A)
4/it is necessary for safety to check the cable carefully and verify it is not damaged before put the plug to the socket. The socket must be easily accessible, must not require any kind of movement. The cable from the machine to the socket must not be pulled tightly, also do not rest the machine on the cable.
Note: The machine has been installed and tested by technical personal before leaving the factory, and it is a qualified production. It is not allowed to dis-assemble or modify the machine without the permission of the manufacturer.

## Operation

1/ The machine has the following control devices on the front panel:
A--- Red button to stop the machine
B--- Green button to start the machine

## 2/ functional test

After having plugged the feeding cable in the electrical supply, the machine is ready for the functional test. To start: press the green button, the machine starts working. To stop: press the red button, the machine will stop working. Start the machine
 without loading, let it run for one minute and make sure it is functioning perfectly. 3/Before everywork-cycle, always make sure the machine is perfectly clean, in particularthosesurfacesthatgetintouch withthedough. Warning: Ifnecessary clean the machine , any sundries and hands away from the rollers before turn on the machine!

[^0]

For DR-2, when the dough comes out from the upper roller, you will see thin dough, with an oval shape with the help of the hook, the dough will turn $90^{\circ}$ automatically and ready for the next trial to through the lowest rollers. Out of these rollers it will have a disk shape, this shape is not perfect so it needs the finishing touches by hand.

ForDR-1 series, when the dough comes out from the roller, you will seethin dough, with anoval shape. you can turn the dough to $90^{\circ}$ by hand rapidly, and ready for the next trial to through the roller again. Out of these rollers it will have a disk shape, this shape is not perfect so it needs the finishing touches by hand.

1/Before effecting any kind ofmaintenance orcleaning you musttake outthe plug .Itis importantnottouse chemical, abrasive or corrosive products. Absolutely do not use running water, abrasive and not smooth tools, such as metal wool etc.; these can damage the surfaces and compromise the hygienically safety. 2/The cleaning must be done every time the machine has been used following all the rules to prevent malfunctioning of the machine and for hygienic purposes.

5/ Lubrication of shafts and rollers Itis necessary to grease shafts and rollers every year. Take off the protections, the slanted wall, the springs and the dough-scrapers; unscrew the fixing screws and takeoff first the back-panel $A$ and then the stands B and C; take offthe rollers DEFG and the joints HIL M .clean all these parts accurately by means of a sponge warm
water and fool detergent, rinse thoroughly and dry it with absorbing paper .grease both the shafts and the rollers holes with a sufficient quantity of paraffin oil. Put back on and fix all the parts, starting from the last taken off piece.

3/ Using a properbrush and a wooden palate, first clean the residue offlour and dough. take them away from the covers, the two slides A, release springs $B, C$, remove the scraping dough pieces $D$ then turn the regulating levers L-L1 in position of maximum opening of rollers.
Accurately clean the machine and in particular the disassembled parts using a sponge or cloth damped with water and detergent.
Rinse thoroughly and dry with an absorbing foodpaper, wipe again all the surfaces that get in touch with the dough and then clean the whole machine with a smooth cloth and specific disinfectant for food-machines.
4/ Mount everything in this order: the scraping dough pieces, the springs, the slides and the protections.

## Regulate the thickness:

Regulating the machine can only be recommended as there are different characteristics of the dough, the weight, the thickness, the size and the shape of the dough. Therefore the correct regulating of the machine must be made by experience. The machine is provided with a medium size regulation for the shapes of pizza . To obtain different thickness of dough, you may regulate as following: A) Turn off the machine. B) Regulate the width between the upper rollers. Pull the black knob in order to release the lever, and then turn the lever to a proper position. Clockwise is to reduce the thickness, anti-cock wise is to increase the thickness. ( Pict.3)

Experience: the width between the upper rollers is twice to the lower rollers.

> Warning :To avoid dangerous conditions and/or possible injuries caused by electric current, mechanical parts, fire or hygiene problems, you must follow the safety indications step by step :

## Warning

To avoid dangerous conditions and/or possible injuries caused by electric current, mechanical parts, fire or hygiene problems, you must follow the safety indications step by step:
$1 /$ keep in order your working area. Disorder can cause dangerous accidents.
2/Consider environmental conditions. Do not use the machine in humid, wet or badly lit environments, close to inflammable liquids orgas.
3/Keep away from children and non authorized personnel. Do not permit them to go near the machine or the working area.
4/ Do not touch the switch and the cable with a wet hand.
5/ Only use the machine with the correct voltage. Normal usage gives better results.
6/Dress in adequate way. Do not wear hanging clothes or any items which can be caught in the machine. Use nonslip shoes. For hygiene and safety, keep your hair tied back and wear protective gloves.
7/Protectthe cable, donotputthe cabletoextractthe plug.Donotleave the cable nearhightemperatures, sharp objects, water or solvents.
8/ Take the plug out. When the machine is not in use, before cleaning, maintenance and moving it. $9 /$ Check that the machine is not damaged. Before using the machine, carefully check that all safety devices are working. Check that: the removable parts are not blocked, there are not any parts damaged, all the parts have been setup correctly and all the conditions that could influence the regularfunctioning ofthe machine are in working order.
10/When the machine is damaged or some anomalies with it, you must turn off the machine at once and apply for authorized assistance from the manufacturer. The repairs can only be done by qualified people, using original spare parts. The non-compliance with these rules can represent danger for the user.

| Anomaly | Cause | Solution |
| :---: | :---: | :---: |
| The machine does not start | 1. Electrical power is missing <br> 2. the input voltage is wrong. <br> 3. other reasons | 1. Check the general switch ,the plug and the feeding cable <br> 2. use a proper voltage. <br> 3. stop using and apply for authorized assistance from the manufacturer. |
| The machine conduct electricity | The wires touch the structure of the machine. | Check the wires, verify the wires do not touch the structure of the machine. |
| Only a group roller working | 1. the belt is broken. <br> 2. the worm wheel is worn-out. | 1.change the belt. <br> 2. change a new worm wheel. |

FA: thermo-protection of motor

Note: It is important that the manual is kept in good condition and should stay with the machine at all time, for safety in use of the machine.

[^0]:    The small dough (20-500g) which have ferment previously (at least 4 to 6 hours), squash the side slightly and put some dry flour on it so it can easily go through the upper rollers.
